Advanced Infographics and Data Visualization

List of Changes

- Come up with a solution for first item in the graphic, the list of common reasons for which drivers get a ticket. In other words, would I leave this in the graphic as a picture? Or would I code it myself?
- Need to enlarge the **slope chart** below the car illustrations. Tried doing this with JavaScript, did not work...
 - Need to add color so that each line in the slope chart corresponds to its respective color car
- Add the **map**
- Would also want to enlarge the **bar charts**, also want to add a margin between the x-axis and the x-axis values.
 - Add a legend (for male and female)
 - Add gridlines (gray and dashed) at the tick marks
 - Remove the black bars for the axes
- Would like to enlarge the **dot plots** in the footer as well. Want to replace the dots with small car illustrations. Also need to make the axes white.
 - Add gridlines (gray and dashed) at the tick marks
 - Remove the black bars for the axes
